# Overview

## Find your own wave

AirWave is a new modular seating solution that combines style, comfort and versatility.

A waiting seat collection that offers performance characteristics that respect both user privacy and airport layout standards. AirWave illustrates this desire to find solutions adapted to specific market requirements.

It has been designed for intensive use and can be configured in all contract environments and public spaces, including airport lounges, hotel lobbies, corporate offices, universities, public rooms and other waiting areas.

The seating line starts with single ottomans, and benches with or without low or high-profile back support that

can be arranged in a linear or curved series, followed by endless possible single and double configurations of single and double seats.

Thanks to its design innovation and endless customizable features, AirWave can appeal to a wide range of contract environments and can be modified over time to adapt to new and evolving trends.

The option to include wireless mobile charging, USB-A, USB-C and UFK sockets brings this solution to the forefront of power-enabled seating.

# Imagine a wave rolling across the room

AirWave enables the creation of infinite sinusoidal curve patterns

The collection is completed with a series of high-backed seats, in single or double units allowing for multiple arrangements. Seating units with high back panels can be arranged stand-alone, side-by-side, or combined to generate various sinusoidal curve patterns.

# Individual and collective spaces

AirWave optimizes working spaces

The shape of the high or low backrests combine to create numerous configurations of sinusoidal curves, allowing you to optimize floor space; units with high backs can be arranged individually, side by side, or combined to generate various patterns.

Depending on the arrangement of seating in short, medium or long wave sine curves, a variety of configurations of collective spaces (teamwork, informal meetings) or more private niches (relaxation or reading areas, individual work) can be created.

## Coat hanger

Detail of the high wave panel with a coat hanger

## Divider panel

The divider panel it provides privacy and extra room to leave luggage and bags. Ideal for airport lounge areas and the coat hanger on both sides complete the concept

## Side tables

The side tables offer extra spaces between two units

# AirWave's equipment

## Features, options and benefits

- Suitable for a wide range of environments including offices, hotels, universities, public lounges and personal and collective spaces
- High or low wave options
- Short, medium and long wave configurations
- Leg or plinth base
- Available in a large selection of fabrics and faux leathers
- Customised project finishes on request
- Optional swivel side table which can incorporate AirCharge
- Optional USB-A, USB-C and UKF power sockets incorporated into the seat
- Irregular and trapezoidal side tables offer extra space between two units
- The AirWave system creates privacy zones or small lounges with low or high-backed hexagonal seat chairs. Each seat can be surrounded by an enclosure that forms both a high back and a screen
- Divider panel with coat hanger
- Manufactured in Italy

# Customized Fabrics

Create your own color scheme

The AirWave models can be customized in several different fabric options. The diagram on the side shows the main components of AirWave, along with the different panels that can be upholstered in coordinating or contrasting colors to suit your scheme.

# Structure finishes

Legs, plinth and back support finishes

Plinth, leg and back structures are available in specified colors as per sample card (see the diagram page 54) and also available in a range of other colors on request.

# Wireless technology

## AirCharge

AirWave's **advantages** is that it is available in a more airy freestanding version and in a version with a plinth base that allows for the addition of swivel console tables and the integration of the electrical connection system as well as wireless charging points for mobile communication devices.

Incorporating AirCharge into the AirWave side tables provides users with a convenient top up charge to their Qi-enabled mobiles, without the need for a cable. Simply place the mobile device onto AirCharge whilst working or relaxing in AirWave.:

- Provides the latest wireless charging solutions to power up your mobile device
- Wireless charging transmitters can be beautifully integrated within any coffee, dining or side table
- Creates a premium feel and enhanced experience, leaving access to power outlets a thing of the past
- Available in various styles and finishes to suit your interior scheme
- Mains or battery powered
- Found in many leading brands including McDonald's, Costa Coffee, Premier Inn and Virgin Train lounges

# Power options

AirWave seating systems can be supplied with various power and USB options :

## PROTON

Proton is designed to provide AC power and USB ‘fast-charging’ in its simplest form. Designed for panel mounting in furniture, Proton presents a single or double-outlet model in a stylish matt silver, matt black, glossy black or chrome decorative bezel.

## USB

USB Type-A connector in the standard flat, rectangular interface that is primarily used on most USB devices. USB Type-C is a new connector, adopted by all the major manufacturers of mobile devices. Reversible with a slim design, it enables significantly faster charging than is possible with the USB Type-A connector.

## The designer

Industrial designer Charles Godbout, living in Montreal, first made his mark on the design industry as founder and CEO of a manufacturing company specializing in exhibiting high-tech systems. After several years he returned to his first love, furniture design, and opened his independent studio, Topo Design.

Since then he has steadily built a solid reputation as a prolific, creative, highly-skilled designer and has collaborated with several furniture companies on an international level.

For him industrial design is, first and foremost, a tremendous tool to serve both human needs and everyday life. Never sacrificing important ergonomic and functional aspects, his achievements are marked by clean lines and are recognized for their pure aesthetics, their elegance and their modernity. He has received numerous national and international design awards, he also teaches at the Design School of the University of Montreal.
